**International Consultation on Incontinence Modular Questionnaire-Overactive Bladder**  
**(ICIQ-OAB)**

<b>Availability:</b>	<p>Please visit this website for more information about the instrument:  <a href="http://www.iciq.net/index.html">http://www.iciq.net/index.html</a>.</p> <p>*Any company intending on using the ICIQ-OAB in their study should contact the ICIQ for permissions prior to use.*</p>
<b>Classification:</b>	Supplemental
<b>Short Description of Instrument:</b>	<p>The International Consultation on Incontinence Questionnaire Overactive Bladder Questionnaire (ICIQ-OAB) is a brief module that screens and assesses impact of symptoms of OAB on Quality of Life and outcomes of treatment.</p> <p>As this questionnaire is short, it may be a useful adjunct to the IPSS because the ICIQ-OAB includes a question on urinary incontinence.</p> <p>Note: An alternate, more comprehensive assessment tool for lower urinary tract symptoms would be ICIQ-MLUTS (males) and its companion ICIQ-FLUTS (females). Also, an ICIQ-Neuro scale is under development.</p>
<b>Scoring:</b>	The ICIQ-OAB is scored from 0-16 overall score with greater values indicating increased symptom severity. "Bother" scales (rated 0-10) are not incorporated in the overall score but indicate impact of individual symptoms for the subject.
